The beauty of Chaos

seeing design in nature

Look around yourself, things appear to be random at first glance but they are not. There is a rule. The randomness of things can be explained by chaos theory. Chaos theory states that things are not really random, just complex. Complex structures could come from simple structures. Design in nature has a common overlooked self-similarity. It is shown by fractals. Fractals are the visual representation of the ideas of chaos theory. Fractals and chaos theory are providing us with a new perspective to view the world. Fractal dimension can measure the texture and complexity of everything according to measure to itself.

There is a pattern in the complex structure of snowflakes

Snow

It's possible to get smaller to a point

Bird

Coastline

How many ways to go to work and if you have to go back, how many ways to go back?

How many ways to go to work and if you have to go back, how many ways to go back?

Plant

How a Snowflake

one of the great examples of fractals found by nature can be seen

1. start with an equilateral triangle
2. divide the triangle into 4 smaller triangles
3. remove the central triangle
4. repeat the process...
